SKILLS

Building with AI
Claude Code, Claude, ChatGPT, Lovable

Agents and automation
API Claude, n8n, E2B, MCP, Skyvern

AI models and tools
Anthropic, OpenAI, Gemini, ComfyUI

Web and data
React, Next.js, Node.js, Supabase (PostgreSQL, RLS), Firebase

Deployment
Vercel, Cloudflare, VPS, Git, Docker

Hand-written code
Basics of HTML, CSS, JavaScript, Python

Game dev
Unity, Unreal 5 (Blueprints), Blender

LANGUAGES

French	native
English	B1

STRENGTHS

Punctual and careful
I respect deadlines and try to avoid mistakes before they happen.

Autonomous and committed
Used to leading my own projects, with steady and careful work.

Calm and thoughtful
I stay calm, even under pressure.

INTERESTS

Piano, boxing, writing, game dev

Aurélien **Lannoye**

Web and AI automation developer (agents, n8n, API integrations)

Available now | Full time | Permanent or fixed-term | Brussels, Wallonia or remote

PROFILE

Bachelor's degree in IT (EPHEC, September 2026). I build AI agents and automations, from the client's need to production, and I develop with AI (Claude Code). My two internships and my student job were on products with real users, so I learned to watch API costs and reliability. I have also published 6 video games (Steam, CrazyGames, itch.io).

EXPERIENCE

Full-stack and AI automation developer (internship) — Feb. to May 2026

The Maul (startup studio), Mont-Saint-Guibert, Belgium

- Worked on **BeaverCode** (beavercode.be), a SaaS that builds websites and apps with AI: front-end, back-end and **Supabase** database.
- **AI agent** that asks questions to a client who wants a website for their business, then defines the need from the answers.
- **Multi-agent system** (design, features, change requests) built in **n8n**, then moved to a **VPS** connected to Supabase.
- Product in production with real users: follow-up of **API costs** and agent **reliability**.

AI automation (voluntary internship) — June to Sept. 2026

Start it @CBC (startup accelerator)

- **Pitch deck analysis agent**: reads the deck and gives a structured analysis of strengths and weaknesses.
- **Document automation** in n8n: searches information in several sources and generates final documents.

AI agent developer (student job) — 2026

Private client

- Set of assistants built with **Claude skills**: a finance agent that collects invoices from several mailboxes, stores them in Google Drive and tracks them in Excel, real estate monitoring, email sorting and reminders.

PROJECTS

Final project: gamAI, video games created by AI agents (React, Supabase, E2B)
You create a web game by chatting with an AI, and agents generate it in cloud sandboxes. Built and deployed alone, restarted from zero three times, about 500 hours.

Easter Egg 2025 challenge platform, EPHEC (Next.js, Vercel)
Official platform of the school's cybersecurity challenge, built in a team of two: code submission, server-side validation, scoring.

Villa Sandoria (villasandoria.com)
Showcase website in five languages for a rental villa, with a gallery and a booking request form.

Mobile app for a clothing brand (Android Studio, Unity)
Team project: chat, 3D avatars, shop. Teamwork with Git branches and pull requests.

On the side: 6 published games (Unity, Unreal Engine 5, JS)
Slurp, selected by CrazyGames (1 project accepted out of 5 submitted) and rated 8.6 out of 10. Somnum and Escape The Brainrots (Steam), multiplayer games made alone.

EDUCATION

Bachelor's degree in IT, EPHEC Louvain-la-Neuve — 2022 to 2026
Focused on development, networks and cybersecurity. Graduated in September 2026.

Secondary school diploma (general), Institut Saint-Albert, Jodoigne — 2019
